Anton Mark Sumollo

Full-Stack Software Engineer (AI Native)

Pampanga, Philippines · antonmark.sumollo@gmail.com · +63 961 353 8452 · in/amssumollo

SUMMARY

Full-stack software engineer with 6 years of engineering experience, the last 3 fully remote at a Y Combinator-backed US startup. I'm AI native and work spec first with my own Claude Code skills and Orca for parallel coding agents. I've built my fundamentals so I can tell fast when a model is confidently wrong. I went from chip design to machine learning to software, and I thrive in startup teams where I can launch fast, fail fast and learn faster. I treat where I work like home, and I'm honest about what I ship. Licensed Electronics Engineer and top of my batch at Holy Angel University.

EXPERIENCE

Software Engineer Full-time · Remote *Apr 2023 — Mar 2026*

SnapMagic · 3 yrs

- Sole software engineer on the CAD team, shipping full-stack features with a **JavaScript** front end and **Django** back end, **REST APIs** and **third-party integrations**
- Resolved **~15 tickets a week** on average, from triage to production, helping keep **Net Promoter Score (NPS) above 60**
- Owned the file download and conversion pipeline end to end, keeping failures **under 1% across 10,000+ downloads a week**
- Took over the **legacy codebase** behind the core file-conversion service, keeping its 6 to 8 virtual machines at **99% uptime** with alerting so no VM stayed down longer than 30 minutes
- Owned LLM pipelines end to end, from extracting structured data out of PDF datasheets to matching written requirements against a **1M+ part database** with **RAG** and **vector search**
- Built an on-demand pipeline that generates CAD models for a partner's **10,000+ part series** the moment a user views a part, with no human in the loop, delivered through a widget on the partner's site
- Designed and shipped **autowiring** for the LLM-driven schematic generation pipeline, replacing a fully manual CAD step, and owned it from problem framing to production release
- Wrote and indexed **PostgreSQL** queries used by 3 teams for metrics reports, invoices and investigations, and traced search slowdowns through **New Relic**
- Owned deployment and monitoring on **Heroku** and **Cloudflare**, protecting resource-heavy endpoints with caching, rate limiting and challenges for bad traffic, and investigating scraping surges

Machine Learning Engineer / IC Design Engineer / Design Verification Engineer Full-time · Hybrid *Jan 2020 — Apr 2023*

Analog Devices Philippines · 3 yrs 4 mos

- Cut **ADC/DAC tester cycle time by 20%** by using **ML** to find and remove redundant test paths without reducing coverage, raising production throughput and earning a **Spot Award**
- Automated test-creation workflows in **Python** and wrote **C/C++** verification scripts for automated test equipment (ATE) on **Linux**, confirming designs were ready for tapeout
- Designed **LDO** and **reference voltage regulator** blocks, one of which went into a **production power management chip**

Freelance Part-time · Remote *Dec 2022 — Sep 2024*

Upwork/Onlinejobs · 1 yr 10 mos

- Reverse-engineered the search and opt-out flows across **30+ data broker websites** using **Python** and **JavaScript**
- Built a **Python** tool that analyzes up to **200,000 Amazon products** per spreadsheet for profitability, sales rank and competition, deployed on **AWS EC2** with a **Redis** and **Celery** queue
- Taught **Python** and **game development** online to grades 6 to 12 at a US private school

SKILLS

Python, JavaScript, TypeScript, SQL, C/C++, React, Next.js, Node.js, Django, HTML/CSS, Tailwind CSS, REST APIs, PostgreSQL, Supabase, Redis, Celery, Docker, AWS (EC2, Lambda, DynamoDB), Azure, Heroku, Cloudflare, New Relic, Linux, Git, CI, n8n, LLM integration, RAG, embeddings, vector search, Vitest, Playwright
